5 Convert to AVI

System supports convert video file of suffix such as mp4,Dav, mpeg ,264 to avi formats.

You can follow the instructions below.

Click “Convert to AVI” button, you can see an image as shown in Figure 4.

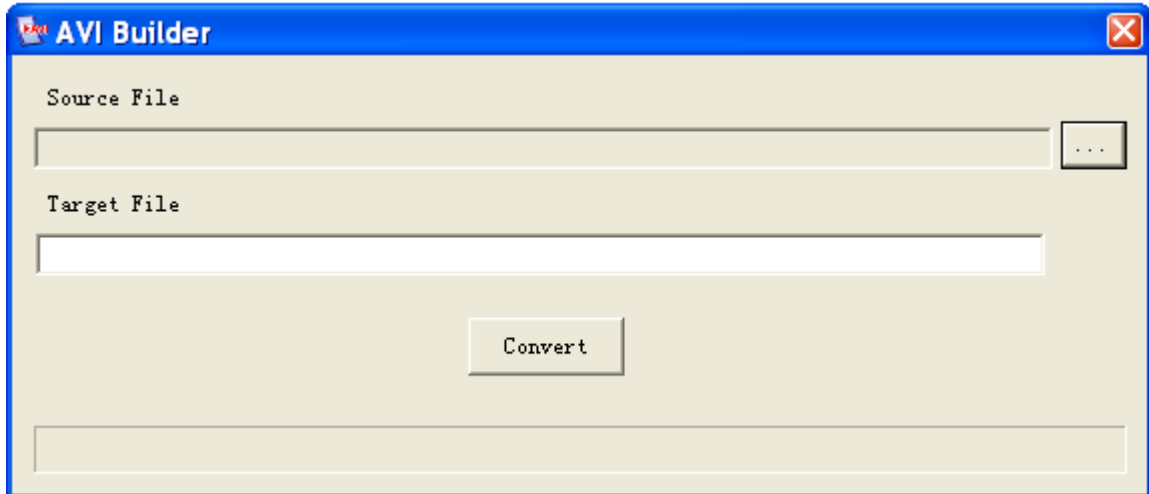

Figure 4 Convert to AVI

Click browser. You can see an image as in Figure 5

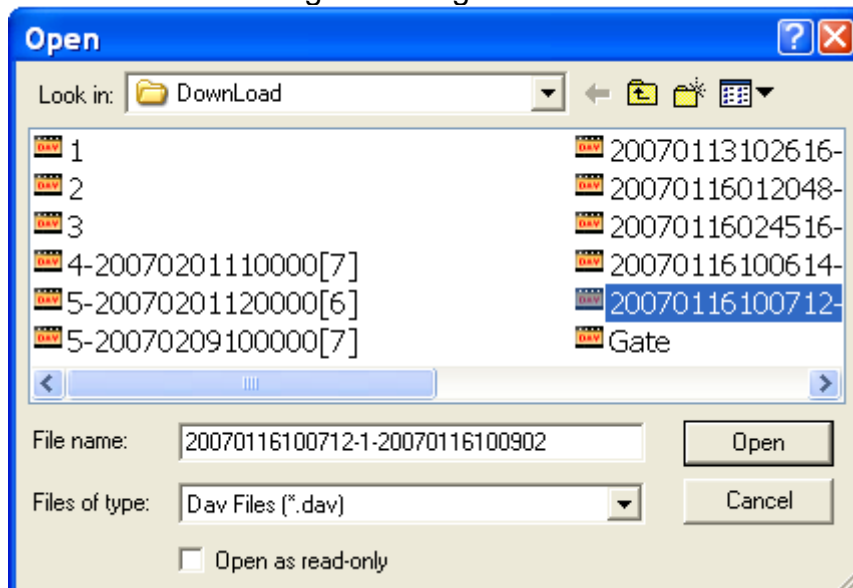

Figure 5 Browser

Select the file you want to convert. Double click file name or select one file and then click open button.

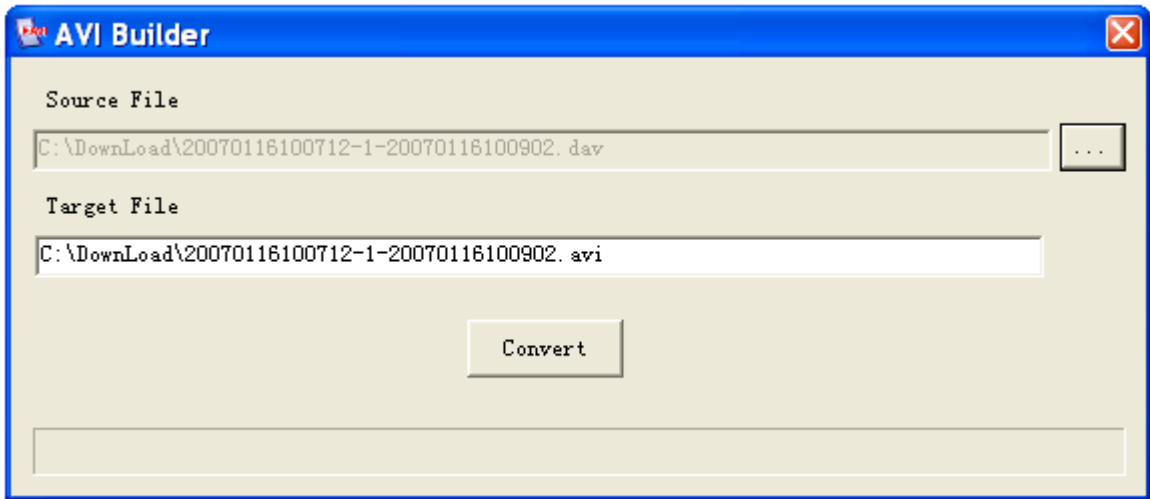

Figure 6 Select File

Click “convert to AVI” button to begin converting. The converted file will be stored in the same path with the original file.

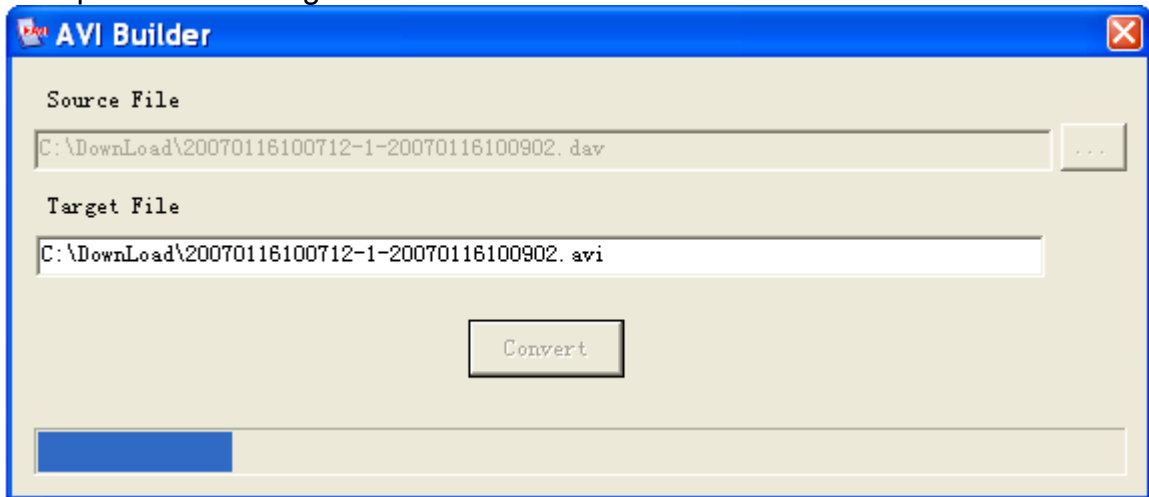

Figure 7 Conversion Process

6 Recording

Click “Start Recording” button, system starts recording. You can see the “Stop” button change to “Stop recording” button.

Click “Stop recording” button after finishing recording.

Now you can select path for the recorded file. See Figure 8 .

You can see a dialogue box as in Figure 9 after you successfully saved the file.

Tips:

After recording, you can drag status bar to the desired location and then click “stop recording” button to record files. In this way you can save a lot of time.

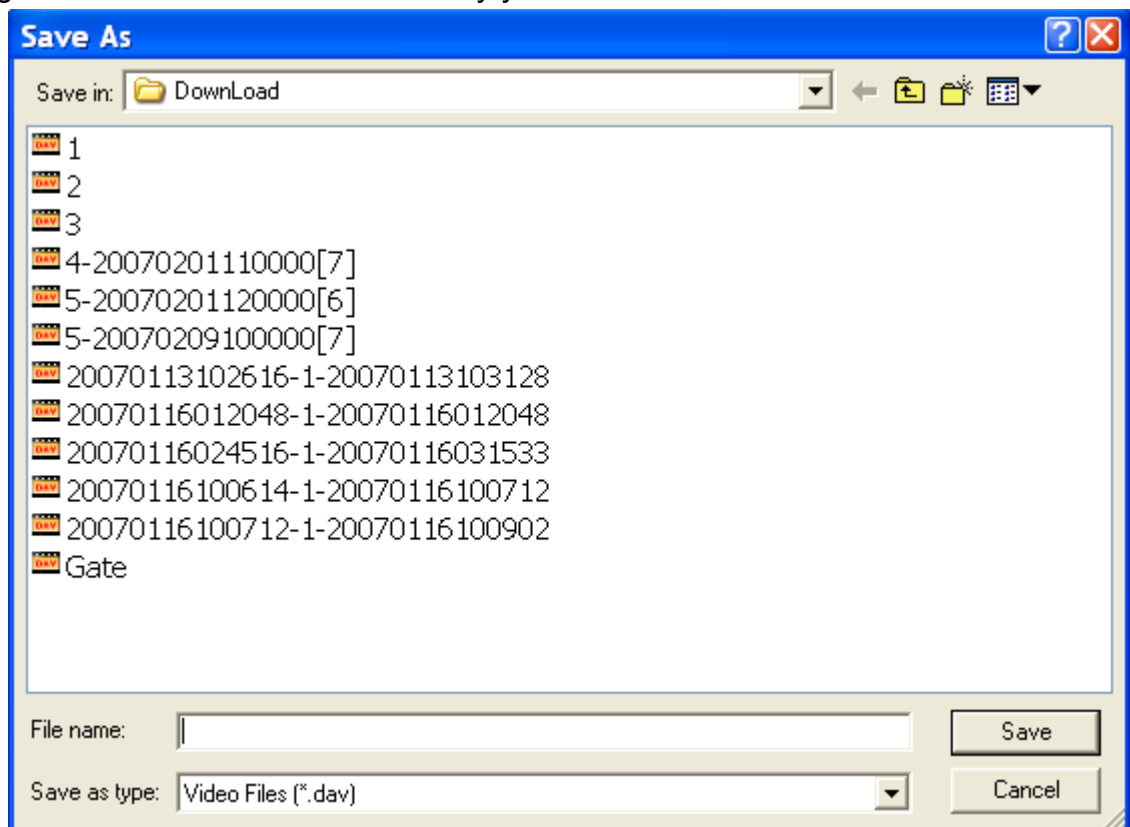

Figure 8 Save as

Figure 9 Successfully Saved

If you are using CD or USB device to backup, player file list can only display the files in current player folder.

7 Parameter Setting

7.1 Parameter Setting When Playing DVR File

When you are playing DVR format file, you can implement parameter setting function. Click “parameter setting” button, system pops up the parameter setting dialogue box. See Figure 10. The play frame rate ranges from 0 to 100. Here you can also modify brightness and file connection.

Figure 10 Parameter Setting
